

Surgical Care Prevention (SCIP)

Hospitals can reduce the risk of wound infections after surgery by making sure patients get the right medicines at the right time on the day of their surgery. These measures show some of the standards of care.

Quality Care Measure Report Card

Key Indicators	Garden City Hospital (a)	State Average (b)	National Average (b)
Percent of Surgical Patients Who Received an Antibiotic Within One Hour Prior to Surgical Incision*	99%	99%	99%
Percent of Surgical Patients Who Received the Appropriate Antibiotics*	99%	99%	99%
Percent of Surgical Patients Who Had Antibiotics Discontinued Within 24 Hours After Surgery Ended*	99%	98%	98%
Percent of Surgery Patients Who Were on Beta Blockers and Received them During Surgery*	98%	98%	98%
Percent of Surgery Patients Who Had the Recommended Blood Clot (VTE) Prevention Given Prior to Surgery*	100%	99%	99%

*Patients who have a condition and/or history where this treatment is appropriate are only included in this indicator.

(a) Garden City Hospital data time period is from July 2014 through September 2014

(b) State and National Average data time period April 2013 through March 2014
